

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, or claims in this application:

Listing of Claims:

Claim 1 (original): A downhole tool for collecting and retrieving junk from a well bore, the tool comprising: a cylindrical body attachable in a work string; a multi-faceted surface comprising a plurality of projections arranged at an end of the body for contacting with and breaking up junk; and a plurality of inlet ports through which the broken up junk passes into a trap for collection, wherein each projection is located between adjacent inlet ports.

Claim 2 (original): A downhole tool as claimed in Claim 1 wherein the projections each include a plurality of tungsten carbide coated surfaces.

Claim 3 (currently amended): A downhole tool as claimed in ~~any preceding~~ Claim 1 wherein the tool further includes a sleeve located around the body, the sleeve including filter means for filtering debris from fluid passing there through.

Claim 4 (original): A downhole tool as claimed in Claim 3 wherein a trap is provided in an annular space between the body and the sleeve.

Claim 5 (currently amended): A downhole tool as claimed in ~~any preceding~~ Claim 1 wherein the ports have a flow path parallel to a longitudinal axis of the tool.

Claim 6 (currently amended): A downhole tool as claimed in ~~any preceding~~ Claim 1 wherein each inlet port includes a valve.

1 Claim 7 (currently amended): A downhole tool as claimed in Claim 3 ~~any one of~~
2 ~~Claims 3 to 6~~ wherein the tool includes a throat, the throat being located adjacent to the
3 projections and having a diameter narrower than a diameter of the sleeve.

4
5 Claim 8 (currently amended): A downhole tool as claimed in ~~any preceding~~ Claim 1
6 wherein the cylindrical body includes an axial bore to permit fluid flow through the work
7 string.

8
9 Claim 9 (original): A downhole tool as claimed in Claim 7 wherein the tool includes
10 one or more milling elements located adjacent the throat and distal to the inlet ports.

11
12 Claim 10 (original): A method of collecting and retrieving junk within a well bore,
13 comprising the steps:

14 a) providing a multi-faceted contact surface on a work string, the surface
15 including a plurality of projections and a plurality of inlet ports, each projection
16 being located between adjacent inlet ports;

17
18 b) breaking up large pieces of junk by contact with the surface;

19
20 c) collecting the broken-up junk through the inlet ports; and

21
22 d) storing the broken-up junk in a trap adjacent the inlet ports.

23
24 Claim 11 (original): A method as claimed in Claim 10 wherein the method includes
25 the steps of providing a mill ahead of the surface and jetting milled junk from the mill towards
26 the inlet ports.

1 Claim 12 (currently amended): A method as claimed in Claim 10 ~~or Claim 11~~ wherein
2 the method includes the step of operating one or more valves at each inlet port to prevent
3 the broken-up junk from exiting the trap.
